

Information processing in SEB mobile application

Privacy policy

Contacts list

SEB accesses contact list to show inside application your contact persons to whom you can send a payment or payment request.

Location

Precise location is used in application to show the nearest SEB ATMs and branches.

SMS

In some Android versions SMS confirmation code is read directly from incoming SMS to automatically confirm phone number.

Phone

When requested application calls dial function from contacts page to call SEB customer infoline.

Photos/Media/Files/Storage

Access is needed to store encrypted database outside of application. This ensures basic financial information accessibility in application without internet connection.

Flurry analytics

Application gathers and summarizes users' statistics about application usage for constant improvements.

Other

Application requires internet connection to function properly, including communicating with bank to fetch data like account information, or payment execution.

Preventing device from sleeping is necessary for application to be able to communicate with bank infrastructure in a secure way.

At any time user can stop using application by uninstalling it, and by deleting own data by calling SEB bank or visiting SEB branch.
